Gillis came down, saying up at the dirt lot he was running this Gehl and it started smoking white and running rough. He shut it down and came and got me. We went up to look at it, oil level good, air filter clean, coolant level good, no warning lights and did not overheat. Topped off fuel tank with fresh diesel, runs good, doesn't smoke. More than likely has bad fuel from sitting so long. DONE

Service call down to muni building. Died on them on the road... got it pulled over to the side. Would start fine on starting fluid but would not stay running. Installed new fuel filter and primed up. Got it running and figured we got it fixed. Died after a couple of mins of running.

Pulled fuel line off of tank and nothing coming out. Gauge was reading at 3/4 full... clearly the gauge or sending unit has gone bad. Filled up with fuel and it took a while to bleed air out of the system but we got it running. Drove back to parks and left it for them. Told Joe H what was going on. They will bring it back later on to figure out whats going on with the fuel gauge.
11/09/2015 @ 13:17:59 IT

Brought this one in... had no trouble starting it. The fuel gauge is still reading 3/4 and I am pretty sure they filled it up. Going to try and determine if its the gauge.. the sending unit in the tank... or wiring.
11/15/2015 @ 15:04:57 IT

Checked the signal coming from the fuel level sender. The tank is full but as far as I can tell there is good signal coming from the sending unit. I also tested the fuel gauge (without a wiring diagram made it difficult, but the gauge seems to be working) My guess is that there was some water stuck in the tank and kept the sending unit from reading correctly. Or the sending unit was just stuck. Can't find anything wrong with it. Going to let it go and just ask parks to keep an eye on the fuel gauge to make sure its working correctly.
